

Supplementary Materials

Defining FDR in the same way as we did in Equation 1,

$$FDR = \frac{P(H_0) * \alpha}{P(H_0) * \alpha + (1 - P(H_0)) * \rho},$$

and substituting power of a two-sided z-test, $(1 - \beta)$, from the Equation 2,

$$\rho = 1 - \Phi_{\mu}(\Phi^{-1}(1 - \frac{\alpha}{2})) + \Phi_{\mu}(\Phi^{-1}(\frac{\alpha}{2})),$$

we arrive to the FDR expressed only in terms of α and $P(H_0)$,

$$FDR = \frac{P(H_0) * \alpha}{P(H_0) * \alpha + (1 - P(H_0)) * (1 - \Phi_{\mu}(\Phi^{-1}(1 - \frac{\alpha}{2})) + \Phi_{\mu}(\Phi^{-1}(\frac{\alpha}{2})))}.$$

Furthermore, we decompose the cumulative density function of normal distribution with mean μ , Φ_{μ} , into

$$\Phi_{\mu}(x) = \frac{1}{2} * (\text{erf}(\frac{x - \mu}{\sqrt{2}})),$$

and the quantile function of standard normal distribution, Φ^{-1} , into

$$\Phi^{-1}(p) = \sqrt{2} * \text{erf}^{-1}(2p - 1).$$

Followingly, we re-express the FDR function as,

$$FDR = \frac{P(H_0) * \alpha}{P(H_0) * \alpha + (1 - P(H_0)) * (\frac{1}{2} - \frac{1}{2} \text{erf}(\frac{\sqrt{2} * \text{erf}^{-1}(1 - \alpha) - \mu}{\sqrt{2}}) + \frac{1}{2} + \frac{1}{2} \text{erf}(\frac{\sqrt{2} * \text{erf}^{-1}(\alpha - 1) - \mu}{\sqrt{2}}))},$$

where erf stands for error function,

$$\text{erf}(x) = \frac{2}{\sqrt{\pi}} * \int_0^x e^{-t^2} dt.$$

Then, the gradient of FDR in respect to α can be written as,

$$\begin{aligned} & \frac{\partial FDR}{\partial \alpha} \\ &= \frac{\frac{\partial (P(H_0) * \alpha)}{\partial \alpha}}{\left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \text{erf}\left(\frac{\sqrt{2} * \text{erf}^{-1}(1 - \alpha) - \mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2} \text{erf}\left(\frac{\sqrt{2} * \text{erf}^{-1}(\alpha - 1) - \mu}{\sqrt{2}}\right) \right) \right)^{-1} + (P(H_0) * \alpha)} \\ & * \frac{\partial \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \text{erf}\left(\frac{\sqrt{2} * \text{erf}^{-1}(1 - \alpha) - \mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2} \text{erf}\left(\frac{\sqrt{2} * \text{erf}^{-1}(\alpha - 1) - \mu}{\sqrt{2}}\right) \right) \right)^{-1}}{\partial \alpha} \end{aligned}$$

$$\begin{aligned}
&= \frac{P(H_0)}{P(H_0)*\alpha + (1 - P(H_0))*\left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right)\right)} + (P(H_0) * \alpha) * \\
&\quad - \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \right. \right. \\
&\quad \left. \left. \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right) \right) \right)^{-2} * \\
&\quad \frac{\partial \left(P(H_0)*\alpha + (1 - P(H_0))*\left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right)\right) \right)}{\partial \alpha} \\
&= \frac{\frac{\partial \alpha}{P(H_0)}}{P(H_0)*\alpha + (1 - P(H_0))*\left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right)\right)} + (P(H_0) * \alpha) * \\
&\quad - \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \right. \right. \\
&\quad \left. \left. \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right) \right) \right)^{-2} * \left(P(H_0) - \frac{1}{2} * (1 - P(H_0)) * erf' \left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}} \right) * \right. \\
&\quad \left. \frac{\partial \left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}} \right)}{\partial \alpha} + \frac{1}{2} * (1 - P(H_0)) * erf' \left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}} \right) * \frac{\partial \left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}} \right)}{\partial \alpha} \right) \\
&= \frac{P(H_0)}{P(H_0)*\alpha + (1 - P(H_0))*\left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right)\right)} + (P(H_0) * \alpha) * \\
&\quad - \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}}\right) + \frac{1}{2} + \right. \right. \\
&\quad \left. \left. \frac{1}{2}\text{erf}\left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}}\right) \right) \right)^{-2} * \left(P(H_0) - \frac{1}{2} * (1 - P(H_0)) * erf' \left(\frac{\sqrt{2}*erf^{-1}(1-\alpha)-\mu}{\sqrt{2}} \right) * \right. \\
&\quad \left. erf^{-1'}(1 - \alpha) * -1 + \frac{1}{2} * (1 - P(H_0)) * erf' \left(\frac{\sqrt{2}*erf^{-1}(\alpha-1)-\mu}{\sqrt{2}} \right) * erf^{-1}(\alpha - 1) \right).
\end{aligned}$$

Where erf' stands for the derivative of error function,

$$erf'(x) = \frac{2}{\sqrt{\pi}} * e^{-x^2},$$

and stands for the derivative of inverse error function

$$erf^{-1'}(x) = \frac{1}{2} * \sqrt{\pi} * e^{(erf^{-1}(x))^2}.$$

The gradient of FDR with respect to α for a one-sided z-test can be obtained in a similar manner, but by substituting a power of one-sided z-test into the Equation 1,

$$\rho = 1 - \Phi_{\mu}(\Phi^{-1}(1 - \alpha)).$$

Then, the gradient of FDR of one-sided z-test in respect to α can be written as,

$$\begin{aligned}
& \frac{\partial FDR}{\partial \alpha} \\
&= \frac{\partial(P(H_0) * \alpha)}{\partial \alpha} \\
& * \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \operatorname{erf} \left(\frac{\sqrt{2} * \operatorname{erf}^{-1}(1 - 2\alpha) - \mu}{\sqrt{2}} \right) \right) \right)^{-1} + (P(H_0) * \alpha) \\
& * \frac{\partial \left(P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \operatorname{erf} \left(\frac{\sqrt{2} * \operatorname{erf}^{-1}(1 - 2\alpha) - \mu}{\sqrt{2}} \right) \right) \right)^{-1}}{\partial \alpha} \\
&= \dots = \frac{P(H_0)}{P(H_0) * \alpha + (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \operatorname{erf} \left(\frac{\sqrt{2} * \operatorname{erf}^{-1}(1 - 2\alpha) - \mu}{\sqrt{2}} \right) \right)} + (P(H_0) * \alpha) * - \left(P(H_0) * \alpha + \right. \\
& \left. (1 - P(H_0)) * \left(\frac{1}{2} - \frac{1}{2} \operatorname{erf} \left(\frac{\sqrt{2} * \operatorname{erf}^{-1}(1 - 2\alpha) - \mu}{\sqrt{2}} \right) \right) \right)^{-2} * \left(P(H_0) - \frac{1}{2} * (1 - P(H_0)) * \right. \\
& \left. \operatorname{erf}' \left(\frac{\sqrt{2} * \operatorname{erf}^{-1}(1 - 2\alpha) - \mu}{\sqrt{2}} \right) * \operatorname{erf}^{-1'}(1 - 2\alpha) * -2 \right).
\end{aligned}$$

R implementation of the gradient computation and its visualization can be found in the Supplementary materials. We want to note that especially for low μ and α , the FDR approaches 0 with decreasing α in such a rate, that the gradient of FDR becomes to steep to visualize.
